DSE4520 MKII

AUTO MAINS FAILURE CONTROL MODULE

The DSE4520 MKII Auto Mains (Utility) Failure Control Module is suitable for a wide variety of single gen-set applications.

Whilst maintaining functions included within higher end controllers, such as generator and load power monitoring, the DSE4520 MKII provides the user with an outstanding size to feature ratio.

Monitoring engine speed, oil pressure, coolant temperature, frequency, voltage, current, power and fuel level, the modules will give comprehensive engine and alternator protection. This will be indicated on the largest back-lit LCD icon display in its class via an array of warning, electrical trip and shutdown alarms.

The module provides electronic J1939 (CAN) and non-electronic (alternator frequency sensing) engine support for diesel, gas and petrol engines all in one variant. With a number of flexible inputs, outputs and protections, the module can be easily adapted to suit a wide range of applications.

Through USB communication the module can be easily configured using the DSE Configuration Suite PC Software or can be fully configured through the module's front panel editor.

All DSE products are supported by our dedicated technical support team, which gives customers and end users access to 24 hour help and advice.
